A digital car salesperson. The dealer's terms.

Kopilotti Sales is a digital car salesperson and a sales channel for dealerships. It negotiates and accepts a price on the dealer's behalf, within the authority and limits set by the dealer.

Not a chatbot | Not dynamic pricing | Dealer keeps control

01 **Vehicle listing**
list price or price negotiation

02 **Agreed price**
Sales accepts within dealer authority

03 **Contract and signature**
using the dealer's selected services

04 **Payment or financing**
funds directly to the dealership

05 **Handover**
arranged with the customer

INVESTOR & PARTNER BRIEF

Product first. Evidence on page two.

Sales agrees the price under the dealer's authority. The salesperson does not need to restart the same negotiation. The contract, electronic signature and payment or financing use the dealer's systems and selected providers.

PROBLEM 01

Negotiation interrupts the digital journey

Search, finance and checkout can be digital, yet price progression often still waits for a salesperson or trade-in manager.

PRODUCT 02

A dealer-authorised sales channel

List price or negotiation leads to an agreed price. This does not yet mean a signed contract, payment or handover. People handle exceptions.

WHY DIFFERENT 03

AI without pricing authority

Natural-language interaction can move fast without delegating margin decisions to a model. The dealer defines the rules; software applies them.

ROLLOUT READINESS

Non-binding demo. The current purchase path stops before real payment. The atomic deal-record path is tested but not connected to customer journeys. Availability, data handoff and completion services must be verified before commercial rollout.

What the repositories support today

Technical evidence is kept separate from future direction. Implemented, tested and visible in the public demonstrator are not treated as interchangeable claims.

PUBLIC DEMONSTRATOR

The public demo illustrates negotiation

Magic Link and dealer-defined deterministic policy are live in the demonstrator. The demo does not establish an operational handoff to external dealer systems.

PERSISTENCE & ISOLATION

Server-side state is implemented

PostgreSQL negotiation persistence, tenant-scoped access, and schema/readiness gates are implemented and tested. This is not a broad production-ready claim for the entire product.

DEALER TOOLING

The Admin path is a real implementation

Dealer Admin includes a generic CSV/DMS-export import flow with validation, dry-run preview, human approval and atomic apply. No live vendor-specific DMS connection is claimed.

BLACK-BOX EVALUATION

Independent behavior checks exist

A separate HTTP/API harness runs live scenarios against pinned local Sales and disposable PostgreSQL. Targeting fails closed to non-production and evidence is redacted.

CURRENT BOUNDARIES

Boundaries we do not blur

- No broad production-ready claim.
- No active Autovista VIS or carVertical production integration or announced partnership.
- No live DDN verification on the public production path.
- Kopilotti does not receive customer funds or make financing decisions.

NEXT MILESTONE

A controlled dealer pilot using vehicle-specific negotiation links. Deeper integrations follow only after the operating model has demonstrated measurable value.
