

Turn price negotiation into a digital sales channel.

Kopilotti Sales extends the used-car buying journey into the moment a buyer is ready to negotiate. The LLM handles language. A deterministic server-side policy engine makes the commercial decision.

Not a chatbot**Not dynamic pricing****Dealer keeps control****01 Buyer**

opens a vehicle-specific path and makes an offer

02 LLM layer

interprets and explains; never sets price

03 Policy engine

ACCEPT / COUNTER / REJECT / ESCALATE

04 Dealer

keeps policy authority and completes the deal

ONE-PAGE OVERVIEW

One missing step in digital automotive retail.

Kopilotti Sales does not replace the salesperson. It digitizes price negotiation when a decision can be made safely within dealer-defined commercial rules.

PROBLEM**01**

Negotiation interrupts the digital journey

Search, finance and checkout can be digital, yet price progression often still waits for a salesperson or trade-in manager.

PRODUCT**02**

A bounded digital negotiation path

Vehicle-specific entry, controlled offer rounds and deterministic outcomes. Cases outside the boundary go to a person.

WHY DIFFERENT**03**

AI without pricing authority

Natural-language interaction can move fast without delegating margin decisions to a model. The dealer defines the rules; software applies them.

FOUNDER-MARKET FIT

The product is rooted in a real automotive retail problem, not generative-AI novelty.
